

## Wool Tri-Sectional Retraction Archwire Stainless Steel 0° Torque

Extensive testing in orthodontic offices has confirmed that these arches are of significant treatment advantage, affording an effective and simple means of achieving positive end term therapy results, coupled with low force, patient friendly procedures. They allow for free sliding of the posterior elements, if desired, along with any degree of anterior axial inclination control chosen. Anchorage slipping is both fast, easy, controlled, and accomplished with little force applied.

Patented by Doctor Arthur Wool, the anterior segments of these wires are rectangular with sizes accommodating both the .018 and .022 bracket slots with the posteriors being reduced squares. Sold individually.
